Preface			<i>page</i> in	
Note	Notation			
Intro	ductior	n to Biopharmaceutical Processes	1	
1.1	Conte	xt	1	
1.2	Single-Unit Operations		1	
	1.2.1	Cell Culture	2	
	1.2.2	Primary Recovery	3	
	1.2.3	Protein Capture	2	
	1.2.4	Polishing Steps	4	
	1.2.5	Viral Clearance	4	
	1.2.6	Formulation	6	
	1.2.7	Additional steps	6	
1.3	Overv	riew of the Impurities to Be Removed	7	
	1.3.1	Process-Related and Product-Related Impurities	7	
	1.3.2	Purity Specifications	8	
1.4	Continuous Production Processes		ç	
	1.4.1	Definition of Batch and Continuous Processes	10	
	1.4.2	Industrial Context	12	
	1.4.3	Some Engineering Considerations	13	
Fund	lamenta	als of Protein Chromatography	27	
2.1	Introd	luction	27	
2.2	Interactions with Chromatographic Media		27	
	2.2.1	Steric Interactions	27	
	2.2.2	Hydrophobic Interactions	28	
	2.2.3	Electrostatic Interactions	29	
	2.2.4	Biospecific Interactions	30	
	2.2.5	Complexation	31	
	2.2.6	Multimodal Interactions	32	
2.3	Modes of Operation		33	
	2.3.1	Single-Column Systems	33	
	2.3.2	Multicolumn Systems	35	

2.4	Mechanistic Models		
	2.4.1	Overview	36
	2.4.2	Thermodynamics of Fluid–Solid Equilibrium	39
	2.4.3	Hydrodynamics	51
	2.4.4	Kinetics of Mass Transfer	55
	2.4.5	Column Efficiency	62
2.5	Model Parameter Estimation		67
	2.5.1	Generalities	67
	2.5.2	Thermodynamics of Fluid–Solid Equilibrium	68
	2.5.3	Hydrodynamics	73
	2.5.4	Kinetics of Mass Transfer	74
	2.5.5	Case Study	74
2.6	Process Design		
	2.6.1	Process Performance Criteria	78
	2.6.2	Process Optimization	79
	2.6.3	Shortcut Design	80
2.7	Concl	usion	83
Coui	ntercuri	rrent Separation Processes	84
3.1	Introd	uction	84
3.2	Count	ercurrent Separation for Idealized Systems	84
	3.2.1	The Equilibrium Stage	84
	3.2.2	Cascade of Equilibrium Stages	87
	3.2.3	Two-Zone Countercurrent Separation Unit	88
	3.2.4	Four-Zone Countercurrent Separation Unit	91
3.3	The S	imulated Moving Bed Process	93
	3.3.1	Principle	93
	3.3.2	Dynamic Behavior	95
3.4	Separa	ation Region for More Realistic Systems	95
	3.4.1	Impact of Nonlinearities in the Fluid–Solid Equilibria	97
	3.4.2	Impact of Dispersive Phenomena	99
3.5	Desig	n of Countercurrent Chromatographic Processes	101
	3.5.1	Unified Design Approach	101
	3.5.2	Empirical Design of a Multicolumn Process from a Single-	
		Column Chromatogram	104
	3.5.3	Shortcut Design of Countercurrent Chromatographic Processes	105
	3.5.4	Benefits from Countercurrent Chromatographic Processes	106
3.6	Concl	usion	108
Coui	ntercuri	rent Chromatography for the Capture Step	110
4.1	Introd	uction	110
4.2	Process Operations and Associated Physical Phenomena		
	4.2.1	Typical Sequence of Process Operations	111

4

vii

	4.2.2	Thermodynamics of Fluid–Solid Equilibrium	112	
	4.2.3	Hydrodynamics and Kinetics of Mass Transfer	116	
4.3	Design of Countercurrent Chromatographic Processes			
	4.3.1	Principle	125	
	4.3.2	Definition of the Process Variables	127	
	4.3.3	Processes with a Number of Columns per Zone Constant during		
		One Cycle	128	
	4.3.4	Processes with a Number of Columns per Zone Changing during		
		One Cycle	141	
	4.3.5	Process Optimization	146	
	4.3.6	Process Control	149	
4.4	Concl	usion	152	
Cou	ntercuri	rent Chromatography for the Polishing Steps	153	
5.1	Introd	uction	153	
5.2	Proce	ss Operations and Associated Physical Phenomena	153	
	5.2.1	Chromatographic Modes	153	
	5.2.2	Thermodynamics of the Fluid-Solid Equilibrium	156	
	5.2.3	Hydrodynamics and Kinetics of Mass Transfer	161	
5.3	Desig	n of Countercurrent Chromatographic Processes	167	
	5.3.1	Binary Separations	167	
	5.3.2	Ternary Separations	179	
	5.3.3	Process Control	200	
5.4	Concl	usion	201	
Prot	ein Con	jugation	203	
6.1	Introduction		203	
6.2	The C	onjugation Reaction	204	
	6.2.1	Conjugation Chemistry	204	
	6.2.2	Kinetics of the Conjugation Reaction	206	
	6.2.3	Conjugation Reactors	216	
6.3	Purifi	Purification of Conjugated Proteins		
	6.3.1	Separation Challenges	225	
	6.3.2	Filtration	226	
	6.3.3	Chromatography	228	
6.4	Process Integration			
	6.4.1	Motivations	238	
	6.4.2	Protein Recycling and Overall Conversion	239	
	6.4.3	Process Performances: Yield and Productivity	241	
	6.4.4	Batch or Continuous Operation?	244	
6.5	Concl	usion	245

7	Prot	Protein Aggregation in Biopharmaceutical Processes			
	7.1	Introduction	247		
	7.2	Experimental Characterization of Protein Solutions	248		
		7.2.1 Aggregate Content, Size, and Morphology	248		
		7.2.2 Protein–Protein Interactions	251		
		7.2.3 Protein Structure	254		
		7.2.4 Solution Viscosity	256		
		7.2.5 Summary	257		
	7.3	Protein Aggregation Mechanisms	257		
		7.3.1 Colloidal Stability and Conformational Stability	257		
		7.3.2 Aggregation Pathway	262		
		7.3.3 Aggregation Rate Constants	264		
		7.3.4 Population Balance Equations	266		
	7.4	Impact of Operating Conditions on Protein Aggregation	269		
		7.4.1 Solution pH	269		
		7.4.2 Salt Type and Concentration	271		
		7.4.3 Temperature	274		
		7.4.4 Protein Concentration	275		
	7.5	Critical Steps for Aggregation in Biopharmaceutical Processes	278		
		7.5.1 Upstream	278		
		7.5.2 Capture Step	279		
		7.5.3 Polishing Steps	279		
		7.5.4 Viral Inactivation	283		
		7.5.5 Filtration	284		
		7.5.6 Summary	287		
	7.6	Methods to Reduce the Aggregate Content	287		
		7.6.1 Limiting Aggregate Formation	287		
		7.6.2 Removing Aggregates	292		
	7.7	Conclusion	296		
8	Con	clusion	299		
	Bibl	liography	301		
	Inde	Index
